Patricia Davies, RN and the Cardiac Rehabilitation program in ProHealthcare at Waukesha Memorial Hospital in Waukesha, Wisconsin have been AACVPR Outpatient Cardiac and Pulmonary Rehabilitation Registry subscribers for three years. By being subscribers, Patricia and her team are able to track start times, attendance rates and readmission rates with more ease.

Currently, they are using the Registries for an improvement project to track minutes of exercise at home. They have changed documentation in session reports to track this outcome and modified home exercise program logs to address this. The treatment plan was modified to track average minutes of exercise and frequency on a monthly basis. They are doing chart reviews on patients to monitor completion of nutrition classes and dietary consultations.

“We have improved care with outcomes in many areas above comparisons of other programs.”
