AACVPR invites you to put your program at the forefront of cardiac and pulmonary rehabilitation.
Join a growing network of change-makers that is demonstrating the value of cardiac and pulmonary rehabilitation.

Get started today at www.aacvpr.org/registry.
Though enrollment in cardiac rehabilitation is improving, it is still an underutilized therapy by a significant number of patients. As healthcare systems emphasize chronic disease management, make sure your profession is heard.

The AACVPR Outpatient Cardiac Rehabilitation Registry collects data from programs just like yours to help build a stronger case for CR. Our growing network currently encompasses more than 110,000 patient records and 430 active CR programs across 47 states.* Join the CR Registry today by visiting www.aacvpr.org/registry.

*As of Spring 2015
Pulmonary Rehabilitation (PR) is a low-cost, high-value service that improves symptoms, function, and quality of life. Quality PR also decreases disability and the staggering cost of healthcare in chronic lung disease, yet is still underutilized. The AACVPR Outpatient Pulmonary Rehabilitation Registry now represents more than 165 programs across 35 states, and contains more than 10,000 patient records.* This registry continues to grow and help demonstrate the value of PR at a national level.

No matter the size of your PR program, each data point is valuable. Start contributing by visiting www.aacvpr.org/registry.

*As of Spring 2015
Drive Improvement and Advance Your Field

AACVPR Outpatient Registries

Track patient outcomes and program performance while building an evidence base for the effectiveness of cardiac and pulmonary rehabilitation in reducing morbidity, mortality, and disability from cardiovascular and pulmonary diseases.

AACVPR invites you to participate in the only national registries in CR and PR.

• Access program and patient data reports instantly, and benchmark your results against national averages.

• Implement quality improvement projects based on real data, and enhance documentation for administrators and referring physicians.

• Influence healthcare policy makers to utilize cardiac and pulmonary rehabilitation, and improve coverage and reimbursement rates for your program.

Calling all programs seeking certification!

Joining the registry will now help with your Program Certification application. Starting with the 2015 application window, programs subscribed to the registries may use registry data to complete their program’s clinical outcomes assessment. A direct link within the application will populate your registry data for easy transfer into the application fields.
